What's New In RSS Feed Reader?

RSS Feed Reader is a lightweight and ultra-simplistic news reader that offers support for RSS. It doesn't integrate advanced options or configuration parameters, so it can be handled by inexperienced

users or those looking for a straightforward app to keep in touch with the latest worldwide events. No setup necessary, besides.NET Framework Provided that you have.NET Framework installed on your PC, you don't need to set up

anything else. This means that you can drop RSS Feed Reader's program files anywhere on the disk and just click the executable to launch the app. More importantly, it doesn't integrate new entries into the Windows registry,

unlike most installers.
Simple interface and
options The user-friendly
interface is made from a
normal window with a plain
and simple structure, where
all you have to do is type or
paste a RSS link, and click
a button to immediately

load the new topics. Apart from the fact that you can select topics and view the contents in the main window, there are no other noteworthy options available here. ...listen to my song, and see if you like it or not, I'd like to know. It

is my first song and I'd like to know how I should finish it, is it ok? Is there something you think is wrong or you could tell me where I can find it? Thanks Hello! I need an app for Windows Phone 8 to help me read several RSS feeds.

I would like the app to be able to provide a user feed when no internet access is available, and also to be able to create a "favorite" list with my favorite feeds and their content. In addition, I would like to be able to select the

articles/tweets I'm looking for someone to help to create an app to read multiple RSS feeds from that and place the data in a database and be able to search trough it by keywords. The most important thing is the

performance and how much time it takes to process the data. Someone who has the skills to make an app like this should be interested in the job and have some Hi everyone, I'm new to mobile app development but I have seen a few of

them and would like to develop an app that has the capability to connect to a RSS Reader to display local news, headlines and images. So, I guess it would need to have the ability to: - Identify specific RSS feeds that can be selected for

reading - Identify a static area in I am looking for an android app that can be able to read multiple rss feeds from net with username and password of each feed and store that in a database and also be able to display the headline of each feed from

the database. We are a digital agency. And we are looking for app developers to

System Requirements:
